# **DETAILED ACTION**

#### Oath/Declaration

The oath or declaration is defective. A new oath or declaration in compliance with 37 CFR 1.67(a) identifying this application by application number and filing date is required. See MPEP §§ 602.01 and 602.02.

The oath or declaration is defective because:

Non-initialed and/or non-dated alterations have been made to the oath or declaration. See 37 CFR 1.52(c).

### Specification

The disclosure is objected to because of the following informalities:

The reference numeral "34" has not been used in the specification per 37 CFR 1.84(p)(5). Page 5, line 27 is the first instant of "ridges" to which the numeral "34" should be associated with.

Appropriate correction is required.

# **Drawings**

The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: "space 29" see page 4, line 30.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended

replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

# Claim Objections

Claim 1 is objected to because of the following informalities:

In claim 1, line 5, "installer" should be "impeller." Appropriate correction is required.

# Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Japanese Patent Application Publication No. 53-1301 (Kamata hereinafter).

Art Unit: 3745

Kamata teaches a centrifugal impeller comprising a closed-type impeller having spirally-swept back flow effecting means 10a (see species of FIG. 3, 5). The means 10a comprises grooves and ridges to collectively form the means. FIG. 3 clearly shows an angle being substantially perpendicular between the means and the bottom wall of the casing.

# Further Cited Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Japanese Patent Application Publication No. 9-4585 (Oba et al. hereinafter) is cited for teaching a mixed-flow sewage pump having a spiral groove 5 on the inner circumferential surface of the shroud 4 to minimize solid particle blocking between the impeller and the casing.

### **Contact Information**

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Richard Edgar whose telephone number is (571) 272-4816. The examiner can normally be reached on Monday thru Friday, 7 am- 5 pm EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Edward Look can be reached on (571) 272-4820. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Application/Control Number: 10/576,322 Page 5
